I. PRÉSENTATION GÉNÉRALE

Le Manuel des groupes médicoéconomiques, fascicule spécial n° 2013/1 *bis* du *Bulletin officiel*, constitue l'annexe I de l'arrêté du 4 mars 2013 (NOR AFSH1310288A paru au *Journal Officiel* du 27 avril 2013) modifiant l'arrêté du 30 juin 2011 relatif au recueil et au traitement des données d'activité médicale des établissements de santé publics ou privés ayant une activité en soins de suite et de réadaptation et à la transmission d'informations issues de ce traitement, dans les conditions définies aux articles L.6113-7 et L.6113-8 du code de la santé publique (arrêté « PMSI SSR »). Il annule et remplace la version précédente du *Manuel de groupage du PMSI en soins de suite et de réadaptation* (Bulletin officiel spécial n° 2012/1 bis).

Ce document présente une nouvelle classification médicoéconomique du PMSI en SSR, au stade des travaux menés par l'Agence technique de l'information sur l'hospitalisation jusqu'en décembre 2012.

Il comprend trois volumes.

Le **premier volume** contient des textes de présentation et des annexes qui concernent l'ensemble de la classification des groupes médicoéconomiques (GME).

Le **deuxième volume** présente la description de la classification des GME par catégorie majeure avec, pour chacune d'elles :

- son titre ;
- la liste des diagnostics d'entrée dans la catégorie majeure ;
- la liste des groupes médicoéconomiques par groupes nosologiques ;
- les listes de diagnostics intervenant dans le groupage.

Le **troisième volume** décrit l'arbre de décision de classement en catégories majeures, groupes nosologiques et racines de groupes médicoéconomiques.

1. INTRODUCTION À LA CLASSIFICATION DES GROUPES MÉDICOÉCONOMIQUES

1.1 Du recueil d'informations du PMSI en SSR aux groupes médicoéconomiques

Les *groupes médicoéconomiques* (GME[1]) constituent un système de classification médico-économique des hospitalisations en soins de suite et de réadaptation (SSR).

L'objet du recueil d'informations du PMSI en SSR et de son traitement est, d'une part, de permettre la description en termes médicaux de l'activité des établissements et, d'autre part, au moyen d'un algorithme s'appuyant sur les informations contenues dans le recueil, de regrouper les hospitalisations en ensembles définis.

Le recueil concerne toute hospitalisation, qu'il s'agisse d'hospitalisation complète ou partielle, d'établissements de santé publics ou privés. Le cadre et les normes de ce recueil sont définis de façon réglementaire. Pour les établissements de santé publics et privés participant au service public hospitalier, le recueil a été institué à compter du 1er juillet 1998, et à compter du 1er juillet 2003 pour les autres établissements de santé privés.

Les recueils sont constitués par semaine calendaire, soit du lundi au dimanche. Ainsi une hospitalisation en SSR est couverte par un ou plusieurs résumés hebdomadaires standardisés (RHS). Dans ces résumés, les jours de présence effectifs des patients sont indiqués pour chaque jour de la semaine.

Les nomenclatures utilisées pour le codage des informations médicales sont :

- la 10e révision de la *Classification internationale des maladies* (CIM–10) de l'Organisation mondiale de la Santé (OMS) pour les « diagnostics » (les motifs de soins) ;
- la *Classification commune des actes médicaux* (CCAM) publiée au *Bulletin officiel* (BO), le *Catalogue des activités de rééducation-réadaptation* (CdARR) et et le *Catalogue spécifique des actes de rééducation et réadaptation* (CSARR) publiés au BO pour les actes.

Le détail des informations contenues dans les recueils est présenté dans le *Guide de production des résumés hebdomadaires standardisés* publié au BO du ministère de la Santé, fascicule spécial n° 2013/2 *bis*.

L'ensemble des tests effectués sur les informations du recueil constitue l'*algorithme de la classification*, définissant 684 groupes médicoéconomiques (GME) répartis en 15 catégories majeures (CM). Le GME est obtenu à partir de l'ensemble des recueils décrivant un même séjour d'hospitalisation complète[2], et il est obtenu de façon indépendante pour chacun des recueils d'un séjour d'hospitalisation à temps partiel.

Dans tous les cas d'hospitalisation, le GME est déterminé sur la base des informations suivantes : les codes de diagnostic décrivant la morbidité principale, les diagnostics associés, l'âge, le caractère post-chirurgical de l'hospitalisation, les variables décrivant la dépendance, les actes médicaux et ceux de rééducation-réadaptation, et le type d'hospitalisation.

Il s'agit, dans le cas de l'hospitalisation complète, de la première classification pour le champ d'activité SSR qui adopte le *séjour* comme unité de groupage (voir historique paragraphe 1.2). Pour l'hospitalisation à temps partiel, l'unité de groupage reste le RHS.

---

[1] Les sigles utilisés dans ce document sont regroupés dans l'annexe 1 du volume 1.

[2] Compte tenu du recueil progressif (envoi des RHS éventuellement avant la fin du séjour) et annuel (on ne reporte pas les RHS de l'année précédente), le groupage d'un « séjour » ne correspond pas toujours à des séjours complets.

L'Agence technique de l'information sur l'hospitalisation (ATIH) développe, maintient et diffuse un programme informatique exécutant cet algorithme, sous la dénomination de « fonction groupage » (FG), programme source destiné à être intégré par les sociétés de service dans un système d'information hospitalier, ou celle de « programme de groupage » (PdG), programme à interface graphique.

Le déroulement de l'algorithme permet de classer un séjour d'hospitalisation complète ou un RHS d'hospitalisation à temps partiel, successivement dans :

- une des 15 CM selon la morbidité principale décrite comme finalité principale de prise en charge, manifestation morbide principale ou affection étiologique ;
- un des 88 groupes nosologiques (GN), à partir de la morbidité principale et des diagnostics associés significatifs pour certains cas ;
- une des 255 racines de groupes médicoéconomiques (RGME), en fonction du GN concerné, à partir de l'âge, de la date d'intervention chirurgicale, de la dépendance physique (combinaison des variables de dépendance concernant l'alimentation, le déplacement, l'habillage, la continence), de la dépendance cognitive (combinaison des variables de dépendance concernant la communication et le comportement), des actes médicaux (CCAM) et des actes de rééducation-réadaptation (CdARR et CSARR) ;
- un des 684 GME, soit spécifique aux prises en charge réalisées au cours d'une journée civile, soit après prise en compte des diagnostics considérés comme complications ou morbidités associées (CMA), selon deux niveaux de sévérité.

L'algorithme de la classification des GME utilise des listes de diagnostics et d'actes et un *arbre de décision*, qui décrit l'ensemble des tests faits sur les informations du recueil pour les classer dans un GME déterminé. C'est un arbre binaire, en oui et non, avec des nœuds et des fonctions de décision qui permettent de tester, par exemple, si l'un des diagnostics associés fait partie d'une liste de complications ou non. L'arbre de décision est décrit dans le volume 3 de ce document.

1.2 Les versions antérieures

La première version d'une classification PMSI pour le champ d'activité des SSR, a été élaborée par le ministère du travail et des affaires sociales (mission PMSI), à partir d'une enquête réalisée auprès d'une centaine d'établissements SSR en France en 1997. Elle était basée sur des groupes homogènes de journées (GHJ), détaillés dans le fascicule spécial BO n° 97/8 *bis*, applicable à compter de l'activité de 1998. Les GHJ cherchaient à discriminer des niveaux journaliers de consommation de ressources. Le GHJ affecté à un recueil était déterminé à l'aide d'un arbre de décision utilisant des variables telles que l'âge du patient, sa pathologie dominante, son niveau de dépendance physique, l'incidence d'une intervention chirurgicale récente, deux niveaux de lourdeur de prise en charge clinique et deux niveaux de rééducation-réadaptation.

Un certain nombre de modifications, notamment celles publiées dans la circulaire n° 105 du 22 février 2001, ont donné lieu à la **version 2**, applicable à compter de l'activité 2001, dont l'essentiel portait sur la création d'un GHJ supplémentaire (n° 280), la révision de la liste des codes pour les prises en charge cliniques très lourdes (PCTL) et lourdes (PCL), la liste des codes de la CIM–10 subdivisés et leur affectation dans l'algorithme, la liste des codes imprécis interdits en finalité principale de prise en charge (FPP) et manifestation morbide principale (MMP) et la liste des codes d'erreurs de la *fonction groupage*.

La **version 3** a été développée à l'occasion du remplacement du *Catalogue des actes médicaux* (CdAM) par la *Classification commune des actes médicaux* (CCAM version v0) pour décrire les actes médicaux dans le recueil du PMSI en SSR de l'activité de 2002. La **version 4**, intégrant la version v1 de la CCAM, a été appliquée pendant la période de 2003 à 2007.

La **version 5** relative à l'activité de 2008 a permis d'intégrer les évolutions des nomenclatures CIM-10 (prise en compte des extensions créées par l'OMS ou l'ATIH) et CCAM (version v10).

La **version 6** relative à l'activité de 2009 a constitué une évolution majeure par rapport aux versions précédentes. Les GHJ disparaissent au profit des groupes de morbidités dominantes (GMD) auxquels s'ajoute un index de consommation de ressource. Le tout est associé à un indicateur de valorisation de l'activité (IVA), détaillés dans le *Manuel de groupage PMSI-SSR* BO spécial n° 2009/1 *bis*. Dans cette version de la classification, chaque RHS se voyait attribué un nombre de points IVA reflétant la consommation journalière de ressources. Les points IVA sont obtenus en sommant les contributions de huit variables : le GMD (déterminé à partir des codes de la morbidité principale et parfois des diagnostics associés significatifs), la dépendance physique, la dépendance cognitive, la classe d'âge du patient, la présence éventuelle de comorbidités ou d'actes valorisants (codés avec la CIM–10 ou la CCAM), un score des activités de rééducation-réadaptation (reflétant la diversité des activités codées avec le CdARR), le type de finalité principale de prise en charge, enfin le type d'hospitalisation.

La **version 7** mise en place à compter de l'activité de 2010, comporte 13 CMC composées de 31 GMD pédiatriques et 52 GMD d'adultes. Les évolutions principales ont concerné la création de 2 CMC permettant de distinguer les affections de l'appareil circulatoire de celles de l'appareil respiratoire (réunies initialement dans une même CMC), avec 10 GMD en remplacement des 5 dans la version 6. Les modifications ont également porté sur les CMC 14, 15, 16, 17 et 18 avec la création au total de neuf GMD (3 dans le CMC 14 et 15, 2 dans la CMC 16 et 1 dans la CMC 17) et la modification d'un GMD dans les CMC 14, 16 et 17 (détaillés dans le *Manuel de groupage PMSI-SSR* BO n° 2010/1 *bis*).

1.3 Conventions d'écriture dans ce document

Afin de limiter le volume de ce document, les libellés des diagnostics et des actes sont abrégés, sans pour autant remplacer ceux des ouvrages de référence, CIM–10, CCAM, CdARR et CSARR.

2. PRINCIPES DE LA CLASSIFICATION : LES ELEMENTS DETERMINANTS DU CLASSEMENT DANS UN GROUPE MÉDICOÉCONOMIQUE

2.1 Du RHS au séjour

Pour les hospitalisations complètes, le groupage se réalise en trois phases :

1. La première phase groupe chacun des RHS du séjour dans un des 88 GN.
2. On attribue alors au séjour le GN le plus fréquent parmi ses 10 premiers RHS (ou sur la totalité des RHS si le séjour est constitué de moins de 10 RHS).
3. On utilise ensuite l'ensemble des informations du séjour pour poursuivre le groupage en RGME puis en GME.

Pour les hospitalisations partielles, la phase 2 n'existe pas, et le GME ne tient compte que des informations présentes sur le RHS.

2.2 La catégorie majeure

La première étape consiste à classer chaque RHS dans une catégorie majeure (CM), correspondant le plus souvent à un système fonctionnel.

Des tests dichotomiques (oui-non) sont réalisés successivement sur les trois variables de la morbidité principale (finalité principale de prise en charge, manifestation morbide principale et affection étiologique) ; ces différents tests conduisent au classement de chaque recueil dans une CM en s'appuyant sur des listes de diagnostics d'entrée propres à chaque catégorie.

Un code diagnostique de la CIM–10 est affectable à une seule CM ; certains peuvent être insuffisamment discriminants et donc n'appartenir à aucune des listes d'entrée de CM.

Les tests sont hiérarchisés dans l'ordre de description de ces informations : la finalité principale de prise en charge est analysée en premier ; si le code diagnostic qui la caractérise n'est pas affectable à une CM, alors c'est la manifestation morbide principale qui est testée ; si cette deuxième étape n'est pas suffisante, c'est alors l'affection étiologique qui est analysée ; si aucun des codes décrits dans ces trois variables n'est affectable à une CM, alors le RHS est groupé dans la catégorie majeure 90 (non groupable ou sans objet).

Une exception existe lorsque la manifestation morbide principale contient un code de la CIM–10 appartenant à la liste des codes orientant en deuxième intention (annexe 7 de ce document). Dans un tel cas, l'arbre de décision teste le code de l'affection étiologique avant celui de la manifestation morbide principale. Par exemple, dans le cas d'une dyspnée (R06.0) renseignée en MMP, c'est d'abord l'AE qui est considérée pour le choix de la CM. Si l'AE est une insuffisance cardiaque (I50.9), le RHS sera orienté dans la CM 05 *Affections de l'appareil circulatoire*.

2.3 Le groupe nosologique

Une deuxième étape consiste à classer chaque RHS dans un groupe nosologique (GN), décrivant le plus souvent la pathologie principale.

Pour ce faire, une fois la CM déterminée, l'orientation des RHS dans l'arbre de la classification se fonde sur l'analyse des codes de morbidité principale à savoir la finalité principale de prise en charge,

la manifestation morbide principale et l'affection étiologique (et des codes de diagnostics associés significatifs dans certains cas).

Au sein de chaque CM, les diagnostics acceptés comme morbidité principale (et dans certains cas comme diagnostics associés significatifs) sont répartis dans des listes. Le nombre de listes par CM est variable. Au total sur les 15 CM, on dénombre 92 listes.

Un code diagnostique de la CIM–10 est affectable à une ou plusieurs listes ; certains peuvent être insuffisamment discriminants et donc n'appartenir à aucune des listes.

Les tests sont réalisés dans l'ordre hiérarchique de lecture des groupes nosologiques selon l'arbre de décision (présenté dans le volume 3 de ce document).

Les trois variables permettant de décrire la morbidité principale (FP, MMP et AE) et parfois les DAS, sont testés tout d'abord vis-à-vis du premier groupe nosologique positionné dans l'arbre de décision ; puis si les codes de la CIM-10 ne sont pas affectables à ce premier GN, le test se poursuit vis-à-vis du deuxième GN ; et ainsi de suite, jusqu'au classement du recueil dans un groupe nosologique (à défaut dans le groupe erreur).

Dans le cas de l'hospitalisation complète, un seul groupe nosologique est affecté à un séjour, à partir du résultat du classement de chacun de ses RHS. Il s'agit du GN le plus représenté parmi les 10 premiers RHS du séjour. Dans les situations d'égalité, le GN retenu est le premier selon l'ordre chronologique des recueils analysés, parmi les plus fréquents.

Dans le cas de l'hospitalisation à temps partiel, chaque RHS est groupé en GN indépendamment des autres recueils de la suite.

2.4 Les racines de groupes médicoéconomiques

2.4.1 Principes de l'orientation en racines de groupes médicoéconomiques

Une fois le GN déterminé, une troisième étape consiste à classer le séjour pour l'hospitalition complète ou chaque RHS pour l'hospitalisation à temps partiel dans une racine de groupes médicoéconomiques (RGME) généralement selon une logique de consommation de ressources.

L'orientation dans une RGME se fonde sur l'analyse d'une ou plusieurs des variables parmi les cinq décrites ci-dessous (âge, indicateur postchirurgical, dépendances physique et cognitive, actes de rééducation-réadaptation). Les variables sont présentées ci-dessous tandis que le détail des racines est présenté dans le volume 3 de ce document.

2.4.2 L'âge

L'âge (« Age ») est calculé à partir de la date de naissance contenue dans le premier recueil du séjour pour l'hospitalisation complète ou pour chaque RHS pour l'hospitalisation à temps partiel.

L'âge est utilisé de façon quantitative et en classes.

Les classes retenues sont :

- âge compris entre 0 et 17 ans (inclus) ;
- âge compris entre 18 et 74 ans (inclus) ;
- âge égal ou supérieur à 75 ans.

2.4.3 L'indicateur postchirurgical

L'indicateur « postchirurgical » (« Chir ») est calculé à partir de la variable date d'intervention chirurgicale dans le premier RHS du séjour pour l'hospitalisation complète ou pour chaque RHS pour l'hospitalisation à temps partiel. Cet indicateur est important pour l'orientation dans certaines racines de GME notamment dans les CM 02, 06 et surtout 08.

L'indicateur « postchirurgical » est utilisé de façon quantitative et en classes.

Les classes retenues sont :

- postchirurgical (« Chir ») : délai depuis l'intervention inférieur ou égal à 90 jours ;
- non postchirurgical : délai depuis l'intervention supérieur à 90 jours ou date d'intervention absente.

2.4.4 La dépendance physique

La dépendance physique (« Dep Phys ») est calculée en additionnant la cotation des 4 variables de dépendance physique du RHS : *habillage, alimentation, déplacement* et *continence*. Pour un séjour d'hospitalisation complète, la dépendance physique retenue est celle renseignée dans le premier RHS du séjour. Dans un séjour d'hospitalisation à temps partiel, chaque RHS est considéré avec sa dépendance physique propre, indépendamment des autres RHS du séjour.

La dépendance physique est utilisée de façon quantitative et en classes.
La valeur minimale est de quatre et la maximale de seize, toute valeur hors de ces bornes est erronée.

Les classes retenues sont :

- Dep Phys = 4 ;
- Dep Phys comprise entre 5 et 8 (inclus) ;
- Dep Phys comprise entre 9 et 12 (inclus) ;
- Dep Phys comprise entre 13 et 16 (inclus).

2.4.5 La dépendance cognitive

La dépendance cognitive (« Dep Cogn ») est calculée en additionnant la cotation des 2 variables de dépendance cognitive du RHS : *relation-communication* et *comportement*. Pour un séjour d'hospitalisation complète, la dépendance cognitive retenue est celle renseignée dans le premier RHS du séjour. Dans un séjour d'hospitalisation à temps partiel, chaque RHS est considéré avec sa dépendance cognitive propre, indépendamment des autres RHS du séjour.

La dépendance cognitive est utilisée de façon quantitative et en classes.
La valeur minimale est de deux et la maximale de huit, toute valeur hors de ces bornes est erronée.

Les classes retenues sont :

- Dep Cogn = 2 ;
- Dep Cogn comprise entre 3 et 4 (inclus) ;
- Dep Cogn comprise entre 5 et 6 (inclus) ;
- Dep Cogn comprise entre 7 et 8 (inclus).

2.4.6 Le score des actes de rééducation-réadaptation

Le score « RR » est calculé en additionnant les pondérations des actes de rééducation-réadaptation codés (à partir du CdARR, du CSARR et de la CCAM), puis en divisant le résultat par le nombre total de jours de présence en semaine (du lundi au vendredi). Dans les situations où aucun jour de semaine n'est coché, les jours de week-end sont utilisés pour calculer ce score. Pour un séjour d'hospitalisation complète, le score RR est calculé sur l'ensemble des RHS du séjour. Dans un séjour d'hospitalisation à temps partiel, le score RR est calculé indépendamment pour chaque RHS.

Chaque acte de rééducation-réadaptation possède une pondération en fonction de la consommation de ressources qu'il représente (cf. annexe 8 *Pondération des actes de rééducation-réadaptation*).

Sachant que certains actes contenus dans la CCAM correspondent à des actes de rééducation-réadaptation réalisés par un médecin et doivent être codés avec cette nomenclature dans le RHS, une pondération leur a été attribuée au même titre que les actes du CdARR et du CSARR, afin de les prendre en compte dans ce score de rééducation-réadaptation (cf. annexe 8 *Pondération des actes de rééducation-réadaptation*).

Ce score est utilisé de façon quantitative et en deux classes (inférieur ou supérieur à un seuil pouvant varier selon les RGME).

2.5 Les groupes médicoéconomiques

Une fois la RGME déterminée, une dernière étape consiste à définir le niveau :

- 0 pour les GME « zéro jour » ;
- 1 ou 2 pour les autres GME selon le niveau de sévérité.

Les principes de l'orientation dans les groupes sont précisés dans les paragraphes suivants.

2.5.1 Les GME « zéro jour »

Des GME dits « zéro jour » ont été créés pour décrire les prises en charge réalisées au cours d'une seule journée civile.

Ils concernent les venues quotidiennes en hospitalisation à temps partiel ainsi que les situations en hospitalisation complète dont la date d'entrée est identique à la date de sortie.

Lorsque le niveau 0 existe pour la racine considérée, le RHS est affecté au GME zéro jour, ou dans le cas contraire au GME de niveau 1.

La liste des racines ayant une subdivision « zéro jour » est présentée en annexe 3.

2.5.2 **Les GME de niveau 1 et 2**

Les niveaux de sévérité permettent de différencier deux niveaux de complexité de prise en charge au sein d'une même racine de GME, en fonction des codes de la CIM-10 et de la CCAM présents dans les recueils.

Le niveau 1 concerne les suites de RHS d'hospitalisation complète ne comportant aucun code marqueur de sévérité, ainsi que les recueils d'hospitalisation à temps partiel si la racine de GME n'a pas de subdivision « zéro jour ».

Le niveau 2 concerne les suites de RHS d'hospitalisation complète comportant au moins un code marqueur de sévérité.

2.5.2.1 Les complications ou morbidités associées

La liste des *complications ou morbidités associées* (CMA) correspond à la liste 9100 portant sur :

- les codes de la CIM-10 renseignant les diagnostics associés significatifs ou la morbidité principale
- les codes de la CCAM saisis dans la zone *actes médicaux* du recueil.

Les listes de codes de la CIM-10 et de la CCAM retenus comme CMA figurent en annexe 4 *Complications ou morbidités associées* du présent document.

Cette liste de CMA est identique quelle que soit la racine de GME considérée.

2.5.2.2 Les listes d'exclusions des complications ou morbidités associées

Pour éviter les redondances entre une affection principale et une affection possiblement prise en compte comme CMA, des listes d'exclusions ont été créées.
Les codes de la CIM-10 appartenant à la liste des CMA ne peuvent avoir un effet CMA qu'après une analyse de leur redondance éventuelle avec les diagnostics retenus pour l'orientation dans un groupe nosologique.

Les listes d'exclusions figurent en annexe 5 (Listes d'exclusions des complications et ou morbidités associées).

Ces listes d'exclusions sont identiques quelle que soit la racine de GME considérée.

2.5.2.3 Niveau de sévérité

Pour qu'un code CIM-10 ou CCAM soit retenu comme un marqueur de sévérité, il faut :

- qu'il appartienne à la liste des CMA ;
- dans le cas d'un code CIM-10, qu'il ne soit pas exclu par un des codes ayant orienté un des RHS du séjour dans le même groupe nosologique que celui retenu pour le séjour.

Pour qu'un séjour soit classé en niveau de sévérité 2, il faut :

- que l'hospitalisation soit à temps complet ;
- qu'au moins un code (CCAM ou CIM-10) soit un marqueur de sévérité au regard des critères précédents ;
- que le niveau de sévérité 2 existe pour le groupe considéré.

Toutes les racines de GME sont subdivisées en niveaux 1 et 2, excepté le cas des soins palliatifs (racines de GME 2303a, 2303b et 2303c) pour lequel le niveau de sévérité 2 ne s'applique pas.

2.6 Modifications de la CIM–10

De nouvelles modifications de notes et de libellés et des créations d'extensions de code sont régulièrement introduites dans la CIM-10. Certaines relèvent de mises à jour de l'OMS, d'autres à l'initiative de l'ATIH pour les besoins des classifications PMSI. La liste de ces modifications est présentée en annexe 6.

Cette année, certaines extensions ont été créées pour permettre l'orientation dans des GME spécifiques ; c'est le cas notamment des extensions pour les états végétatifs chroniques.

3. FONCTION GROUPAGE

3.1 Généralités

Depuis mars 1998, le ministère de la santé met à la disposition des intégrateurs informatiques les sources de la librairie nécessaire au groupage, complétées de tables, l'ensemble étant appelé fonction groupage (FG).

Les informaticiens peuvent donc l'intégrer dans leurs logiciels groupeurs, ce qui leur permet d'obtenir un groupage conforme à la classification en vigueur. Aucune obligation ne leur est faite cependant d'avoir recours à la FG, et certains choix de développement conduisent des informaticiens à développer leur propre moteur de groupage.

Pour l'utilisateur final, qui continue de recevoir gratuitement GENRHA pour les établissements publics et PSPH (ou son équivalent intégré dans le logiciel AGRAF-SSR pour les établissements privés), la garantie d'un groupage conforme est fournie par les vérifications que réalise ce programme, puisque GENRHA (AGRAF-SSR) intègre lui-même la FG : pour produire des recueils anonymisés, GENRHA (AGRAF-SSR) lit un fichier de recueils groupés, c'est-à-dire un fichier de recueils déjà traités par le groupeur de l'utilisateur, et outre le fichier de recueil anonymisé produit en sortie, il établit un rapport d'exécution dans lequel l'analyse de la conformité de groupage et les erreurs sont détaillées.

3.2 Les erreurs détectées par la fonction groupage

La constitution des recueils étant le résultat d'une suite d'opérations multiples, dont la plupart sont manuelles, des erreurs peuvent s'y introduire. C'est pour cette raison que la FG met en œuvre une phase de contrôle avant de réaliser le groupage à proprement parler. Les erreurs détectées peuvent être de plusieurs ordres : erreur de codage, erreur de saisie, erreur de hiérarchisation, problème matériel, etc. se traduisant par l'absence d'une donnée, un format de donnée non conforme, une donnée incohérente, etc. Selon les cas, ces erreurs peuvent rendre impossible la détermination du GME (l'erreur est alors qualifiée de **bloquante**), ou n'être que l'indicateur d'une qualité de données suspecte, sans conséquence absolue sur le résultat du groupage (c'est une erreur **non-bloquante**). Elles peuvent aussi traduire un dysfonctionnement matériel ou logiciel sans rapport avec le recueil traité.

C'est pourquoi depuis son origine, la FG ne fournit pas seulement en retour la valeur du groupe correspondant au recueil traité, mais aussi un code, dit code retour, dont la valeur permet de savoir si des erreurs ont été détectées. Ces dernières sont classées en trois catégories : les erreurs d'implémentation, les erreurs détectées par les contrôles, et les erreurs détectées dans le parcours de l'arbre de décision du groupage. La valeur 000 quant à elle signifie que tout s'est bien déroulé.

Notons que la FG fournit les codes retour sous deux formes distinctes et simultanées, auxquelles a accès tout programme groupeur intégrant la FG :

• Trois vecteurs de codes retours, récapitulant la totalité des erreurs détectées dans le recueil pour chacune des trois catégories d'erreurs. Ces vecteurs sont riches d'information, mais ils ne sont pas normalisés ; ils peuvent être exploités de différentes manières par le programme groupeur, voire être complètement ignorés. GENRHA (ou AGRAF-SSR) ne teste leur conformité en aucune façon ;

• Un code retour unique, qui doit impérativement être exploité par le programme groupeur, et que GENRHA (ou AGRAF-SSR) retrouvera identique si le recueil n'est pas modifié.

Une nouveauté est à signaler par rapport aux précédentes classifications utilisées dans le champ SSR. En raison de l'unité de groupage utilisée dans les GME, si une erreur bloquante est détectée sur un RHS d'un séjour, alors l'ensemble du séjour est groupé en erreur qu'il s'agisse d'une hospitalisation complète ou partielle.

Les paragraphes qui suivent donnent les principes généraux des trois catégories d'erreur : les erreurs d'implémentation, les erreurs détectées par les contrôles, et les erreurs détectées dans le parcours de l'arbre de décision du groupage. Pour obtenir la description à jour et exhaustive des tests effectués et des codes retour associés, le lecteur est invité à se reporter à la documentation de GENRHA qu'il trouvera sur le site de l'ATIH (en suivant dans l'arborescence *Produits et Contrats / Espace de téléchargement*).

3.2.1 Les erreurs d'implémentation

Il s'agit des erreurs provoquées par un dysfonctionnement matériel ou logiciel, comme par exemple la détection d'une capacité de mémoire vive insuffisante, l'absence d'une table nécessaire au groupage, etc. Bien entendu, la détection d'une telle erreur interdit au groupage de se poursuivre (erreur bloquante). A titre indicatif, on trouvera ci-dessous la liste des erreurs d'implémentation utilisées dans la version 7.3.6.1 de GENRHA (mise à jour pour le traitement et transmission des données PMSI SSR du M12 2012) :

004	Erreur mémoire
005	Table endommagée
006	Corruption d'une table
007	Table introuvable

La plupart du temps, l'utilisateur confronté à ce type d'erreur devra se tourner vers son prestataire informatique pour en trouver l'explication et la solution.

Par convention, la détection d'une erreur de cette catégorie s'accompagne du résultat de groupage suivant : **90097.**

3.2.2 Les erreurs détectées par les contrôles

Il s'agit des erreurs mises en évidence par la fonction groupage à la lecture des recueils. La détection de telles erreurs, si elles sont bloquantes, interdit la poursuite du groupage mais autorise la poursuite de la détection d'autres erreurs, afin d'effectuer un diagnostic complet de la validité du recueil traité.

A titre indicatif, on trouvera ci-dessous la liste des erreurs bloquantes utilisées dans la version 7.3.6.1 de GENRHA (mise à jour pour le traitement et transmission des données PMSI SSR du M12 2012) :

Annexe 3 – CARACTÉRISTIQUES DES RACINES DE GROUPES MÉDICOÉCONOMIQUES

Cette annexe présente sous la forme d'un tableau les caractéristiques propres à chacune des racines de groupes médicoéconomiques :

RGME : numéro de la racine de groupes médicoéconomiques (RGME) composé de 5 caractères (2 caractères relatifs à la catégorie majeure, 2 caractères en lien avec le groupe nosologique (GN) et 1 caractère permettant de distinguer les RGME issues d'un même GN ;

Niveaux : cette information permet de signaler les RGME à l'origine des GME « zéro jour » et de niveau de sévérité 1 et/ou 2 ;

Libellé RGME : libellé de la RGME, composé du libellé du GN et des tests réalisés par l'algorithme de groupage, propres à chaque racine.

Les informations relatives aux variables intervenant dans chacune des racines de GME sont décrites dans le volume 3 de ce manuel.

Annexe 6 – CODES ÉTENDUS DE LA CIM–10

EXTENSIONS DE CODES DE LA CIM–10

La table analytique (chapitres I à XXII[3]) de la dixième révision de la *Classification internationale des maladies* (CIM–10) est divisée en catégories dont les codes, alphanumériques, sont constitués de trois caractères. La majorité des catégories sont subdivisées en sous-catégories codées avec quatre caractères. Dans le cadre du recueil d'informations du PMSI, la règle est de coder avec quatre caractères chaque fois qu'une catégorie est subdivisée ; les codes à trois caractères ne sont admis que lorsqu'ils correspondent à des catégories non subdivisées. Mais les recueils standards d'informations du PMSI utilisent aussi des codes étendus au-delà du quatrième caractère. Ils ont deux origines :

- des extensions prévues par la CIM–10 elle-même ; il s'agit donc d'extensions à caractère international ;
- la création d'extensions nationales.

1. Les extensions internationales

La CIM–10 propose des extensions de codes dans ses chapitres XIII *Maladies du système ostéoarticulaire, des muscles et du tissu conjonctif*, XIX *Lésions traumatiques, empoisonnements et certaines autres conséquences de causes externes* et XX *Causes externes de morbidité et de mortalité*. Elles sont présentées comme « une sous-classification » ou comme « des subdivisions données à titre facultatif ». Certaines extensions des chapitres XIII et XIX sont classantes, c'est-à-dire que selon qu'on les emploie ou bien qu'on utilise le code non étendu, le classement en GHM est susceptible de différer. En revanche, les extensions du chapitre XX, comme ses codes non étendus, ne sont jamais classantes.

Dans les recueils standards du PMSI ces extensions doivent être placées en cinquième position des codes. Lorsqu'elles s'appliquent à un code à trois caractères (catégorie de la CIM non subdivisée) la quatrième position vide doit être complétée par le signe « + » (plus). Par exemple : M45.+7 *Spondylarthrite ankylosante lombosacrée* (code M45 de la spondylarthrite ankylosante étendu par le code 7 de la localisation lombosacrée : CIM, volume 1 page 695 ou p. 660[4]).

Pour ce qui concerne le chapitre V de la CIM–10 *Troubles mentaux et du comportement*, les extensions de ses codes se fondent sur la *Classification internationale des troubles mentaux et des troubles du comportement – Critères diagnostiques pour la recherche*[5]. En raison de leur grand nombre, elles ne sont pas incluses dans cette annexe. Le chapitre V *in extenso* de la CIM–10, incluant les extensions, est accessible sur le site Internet de l'Agence technique de l'information sur l'hospitalisation (ATIH). Pour son emploi, il est recommandé de consulter l'avertissement figurant dan l'encadré suivant.

[3] Le chapitre XXII a été créé par la mise à jour de 2003 (qui s'est appliquée à partir de la version 10 des GHM).

[4] Référence : édition imprimée en 3 volumes de la *Classification statistique internationale des maladies et des problèmes de santé connexes*, dixième révision. OMS éd. Le premier numéro de page correspond à l'édition de 1993, le second à celle de 2008.

[5] Ouvrage coédité par l'OMS et les éditions Masson (1994).

Il a été décidé de donner aux utilisateurs – tout particulièrement en psychiatrie – la possibilité d'utiliser une version augmentée de la CIM–10 la plus complète possible. C'est pourquoi le chapitre V publié par l'ATIH inclut les propositions de codage fournies dans la *Classification internationale des troubles mentaux et des troubles du comportement – Critères diagnostiques pour la recherche* (ouvrage à couverture verte, coédité par l'OMS et Masson). Celle-ci reprend en effet les extensions de codes mentionnées dans la *Classification internationale des troubles mentaux et des troubles du comportement – Descriptions cliniques et directives pour le diagnostic* (ouvrage à couverture bleue, coédité par l'OMS et Masson), à l'exception de celles pour la catégorie F66 (*cf. infra*) et en y ajoutant les siennes propres. **L'ATIH insiste sur le fait que ces deux ouvrages ne doivent pas être utilisés pour le codage** : ils contiennent de nombreuses erreurs de codes, et les libellés peuvent différer de ceux du volume 1 de la CIM–10, qui reste l'ouvrage réglementaire de référence. D'autre part, pour respecter les prescriptions internationales, la 4e position du code (celle située après le point) ne peut pas être employée : toutes les extensions utilisant cette position ont donc été révisées, en déplaçant le caractère supplémentaire en 5e position et en remplaçant la 4e position actuellement vide par le signe « + » (plus). **Ce sont donc bien les libellés et codes donnés dans le document en téléchargement sur le site de l'ATIH que les utilisateurs doivent employer.** Par ailleurs, seules les modifications présentes dans le document fourni par l'ATIH sont intégrées dans les tables de contrôle du recueil et de la *fonction groupage*. Les extensions de F66 caractérisant des orientations sexuelles, mentionnées dans le « livre bleu », non reprises dans le « livre vert », ne peuvent pas être utilisées.

On insiste également sur le fait que l'emploi de certains libellés ainsi complétés peut entrainer des difficultés, en particulier quand ils intègrent des informations de nature différente : ainsi en est-il, par exemple, de l'extension « avec traumatismes ou autres blessures physiques » (5e caractère « 1 ») proposée avec le 4e caractère « .0 » des catégories F10–F19 *Troubles mentaux et du comportement liés à l'utilisation de substances psychoactives*. Chaque fois qu'un libellé contient plusieurs informations qui peuvent être codées distinctement, il est préférable d'utiliser un codage multiple. Cette consigne est tout spécialement à appliquer pour les extensions suivantes, utilisables :

– avec le caractère .0 des codes du groupe F10–F19 :
  1 *avec traumatismes ou autres blessures physiques* : coder ceux-ci selon leur nature
  2 *avec d'autres complications médicales* : coder celles-ci selon leur nature
  5 *avec coma* : coder en sus le coma
  6 *avec convulsions* : coder en sus les convulsions
– avec le caractère .3 des codes du groupe F10–F19 :
  1 *avec convulsions* : coder en sus les convulsions
– avec le caractère .4 des codes du groupe F10–F19 :
  1 *avec convulsions* : coder en sus les convulsions

Le remaniement du chapitre V a été l'occasion d'intégrer les règles d'orthographe, de ponctuation et de typographie recommandée en France. Les libellés incomplets (non signifiants hors contexte) ont été reconstitués. La prise en compte de toutes ces modifications a obligé à modifier la mise en page initiale du chapitre V : c'est la raison de sa publication *in extenso* sur le site Internet de l'ATIH.

2. Les extensions nationales

Les modifications nationales consistent essentiellement en des extensions de codes de la CIM–10 mais elles comprennent aussi la création en 2009 (pour la version 11 des GHM) d'une catégorie : U90 *Autres formes de pharmacorésistance*, comportant deux sous-catégories :

- U90.0 *Résistance aux antiépileptiques*
- U90.9 *Résistances a un traitement, autres et sans précision*

Les extensions de codes de la CIM–10 à usage national ont été créées pour le PMSI dans un double but :

- apporter plus de précision à certains codes pour améliorer le classement en GHM de RSS correctement codés, et permettre le repérage de prises en charge susceptibles d'expliquer les différences de consommation de ressources ;
- apporter plus d'information à visée purement documentaire, à la demande de sociétés savantes.

Les premiers codes étendus nationaux ont été créés en 1996 pour application au 1er janvier 1997 dans la version 4 de la classification des GHM. Chacune des versions suivantes a comporté de nouvelles extensions.

L'intention initiale était que les extensions nécessaires au groupage dans une classification médico-économique soient placées en cinquième position, celles à visée documentaire en sixième position des codes originels de la CIM. Mais cela n'a pas toujours été possible. Lorsqu'une extension laisse un « blanc » (un vide en quatrième ou en cinquième position), il est rempli par le signe « + ». Par exemple, B24.+0 *PréSIDA* et J96.1+0, J96.1+1 *Insuffisance respiratoire chronique obstructive, restrictive*.

On désignera dans ce qui suit par « codes-pères » les codes bénéficiant d'extensions nationales, créées pour les besoins du PMSI ou à titre documentaire. Les codes étendus qui en résultent seront nommés « codes fils ».

Le tableau suivant recense les extensions nationales créées pour les versions 4 à 11d de la classification des GHM (versions 3.4 à 13.11d de la *fonction groupage*). Les parenthèses, crochets et notes d'exclusion ont le même sens que dans la CIM. Bien qu'on se situe à un niveau inférieur à celui de la catégorie, les notes d'inclusion sont introduites par « ***Comprend :*** » pour la clarté de la présentation.

Les mises à jour officielles de la CIM–10 par l'Organisation mondiale de la santé sont publiées sur le site Internet de l'ATIH. Les extensions de codes objets de la présente annexe ont été associées à cette publication afin d'offrir aux utilisateurs un document unique répertoriant, par rapport au contenu du volume 1 de la CIM, l'ensemble des ajouts et modifications internationales et nationales. Certains intitulés anciens ont, à cette occasion, été révisés, afin de les rendre homogènes avec ceux intégrés à la publication des mises à jour. Il ne s'agit chaque fois que de modifications de forme, non de fond, le code conservant toujours son sens antérieur.

Dans le tableau qui suit on entend par « code-père » le code immédiatement susjacent au code étendu observé ; par exemple, I21.0 est le code-père de I21.00 et I21.00 est le code-père de I21.000.
